

Ionix makes plastic cleanup FAST and EASY!

Eliminate static while blowing off!

NO nuclear material

**Rugged enough for
floor shop use**

Sample installation of PL300-2 Ionix Static Control System including hose and gun

**Install the Ionix Static Eliminator in your
blow off air line and static disappears!
*Faster plastic cleanup with less handwork!***

How Ionix works in your shop

Ionix makes the blow off air going to the plastic surface a static eliminator! When blow off air passes through the Ionix Static Eliminator, the air is made electrically dissipative. When that Ionix treated air is then blown onto the surface, the static charged surface and dust discharge through the Ionix air and static is gone!

New Technology

The Ionix Static Eliminator utilizes a unique means of neutralizing static which has been recognized by the award of US Patent 5,402,304 by the US Patent Office.

Reliable, Safe, Automatic Operation

The Ionix Static Eliminator requires no electricity or maintenance. Simply install the unit in the blowoff air line and it works automatically. When exhausted, the Ionix can be disposed in normal waste and recycled with plastics. It contains NO hazardous or nuclear materials.

Easy to install

Anyone can install the Ionix Static Eliminator in less than 10 minutes on any air line. Simply cut the blow off air line and hose clamp the hose ends over the ends of the unit. Installation is complete! Install one Ionix per air gun.

Ionix is unconditionally guaranteed!

Ionix unconditionally guarantees the Ionix Static Eliminator for 30 days. If you are unsatisfied, return the Ionix within 30 days for a full refund. Ionix is warranted for 6 months and replacement is recommended after 1 year.

Ionix models

There are different Ionix models to eliminate the static charges characteristic on different surfaces. Ionix are made for 3/8" ID air hose.

Plastics cleanup: PL300-3

Composite cleanup: Two model PL300-3 in series

The PL300-2 units are rated to 50 PSI. For pressures over 50 PSI, use the HPPL300-2 rated to 150 PSI.

High pressure Ionix: Model HPPL300-2

Ionix is easy to install and use!

Install Ionix on an air hose used only for blow off.

If you do not have a separate blow off air hose, you can purchase the complete *IONIX* Static Eliminator system including an *IONIX*, 25' of air hose with 1/4" threaded nipple ends and pistol grip air gun. Just thread your quick connect to the end of the hose and installation is complete. To install, attach the air hose with the Ionix to the end of your shop air hose when your ready to blow off your work.

If you have a spare air hose, you can install Ionix on that air hose. Ionix does not require a special hose or gun. When you're ready to blow off the surface, connect the Ionix hose to your air source and blow off the surface. Remove the Ionix air hose from the air source when done.

If you do have a separate blow off air line, purchase an *IONIX* cartridge only, cut the hose ends and push and clamp the hose ends over the ends of the *IONIX*.
