

HOSE CLAMPING

HAND CRIMPER

Technical Description:

The hand crimper is a manually operated low pressure hose press, and does not require any power or compressed air during operation.

The pressing force is generated by pressing down the lever and can be applied with one hand by a person of average strength.

The press is as standard supplied with two sets of pressing jaws:

One for hoses DN 3 to 8

One for hoses DN 10 to 16.

Crimp range: 10-36 mm

The hand crimper is in accordance with DIN EN ISO 12100-1,2 for safety of machinery.

Installation:

The low pressure hose press ND 316-E must be placed on a strong/firm and level base frame and bolted down.

Always pay attention that you have adequate space for working and that adjacent machines do not hamper or endanger you.

Always pay attention to adequate lighting at the workplace in accordance with the national regulations.
